Our Plan to Build the ADHD Money App

@Robert · Oct 26, 2026

Our app shows people with ADHD **how much they can safely spend today**, and welcomes them back after a break with no blame.

How we work: Agile

We follow **7 Agile steps**: Research → Feature list → Sprint plan → Effort guess → Build and test → Release → Improve.

Steps 3 to 5 repeat every 2 weeks, and each loop is a **sprint**. After every sprint we **show** the work to 3 to 5 people with ADHD, **look back** at what to improve, and **change the plan** if we learned something.

Each feature is a short story, like "I want a bill countdown so bills don't surprise me." We sort them into **Must**, **Should**, **Could** and **Won't (for now)**, Musts first.

Our timeline (a best guess we update every sprint)

Step	Weeks	By the end…
Research	1–2	We talk to 8 people with ADHD and sort features
Sprint 1	3–4	People open the app safely with their face or finger
Sprint 2	5–6	People see how much they can safely spend today
Sprint 3	7–8	People add spending in 2 taps and see bills coming
Sprint 4	9–10	People set up in 5 minutes and keep their place
Sprint 5	11–12	People get a fresh start and gentle reminders
Sprint 6	13–14	People link a practice bank (a Could-have)
Release	15	100 adults with ADHD, about half women, start testing
Improve	15–26	We fix their biggest problems, one sprint at a time

It works if 4 in 10 testers still use it after 4 weeks and 6 in 10 return after a break.
